Allowable Subject Matter

Claims 1-3, 5-23, 25-44, 46-53, 55-61, and 63-68 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a radio frequency identification device including communication circuitry with indication circuitry to indicate presence of the remote communication device responsive to the control signal. Each independent claim identifies the uniquely distinct features:

Regarding claim 1: Indication circuitry coupled with the communication circuitry and configured to receive the control signal and to indicate presence at the radio frequency identification device responsive to the control signal; and wherein the communication circuitry is configured to output another wireless signal including backscattering electromagnetic energy received by the radio frequency identification device.

Regarding claim 5: Communication circuitry configured to receive a wireless signal including and to write the data to a data port responsive to the processing of the identifier, and indication circuitry configured to receive the data and to indicate presence of the remote communication device responsive to the data.

Regarding claim 11: Indication circuitry configured to write data to a data port, indication circuitry including a latch coupled with the data port and configured to receive data, and an indicator configured to output a signal to indicate presence of the remote communication device responsive to the data received within the latch.

Regarding claim 16: Indication circuitry coupled with the communication circuitry and configured to receive the control signal and to output a human perceptible signal to indicate presence of the radio frequency identification device responsive to the control signal; wherein the communication circuitry is configured to output another wireless signal comprising an identifier of the radio frequency identification device.

Regarding claim 25: Communication circuitry configured to selectively write data from a wireless signal to a data port responsive to processing an identifier and indication circuitry configured to receive the data and to indicate presence of the respective remote communication device responsive to the data.

Regarding claim 30: Communication circuitry with the substrate and including a data port, the communication circuitry being configured to receive the wireless signal, to process the identifier, to selectively process the command responsive to the processing of the identifier, and to selectively write the data to the data port responsive to the processing of the command; indication circuitry coupled with the data port and configured to receive the data and to output a human visual signal to indicate presence of the radio frequency identification device responsive to the data.

Regarding claim 36: A wireless signal including data within the remote communication device, selectively outputting the data to indication circuitry of the circuitry of the remote communication device after the processing, and emitting a human perceptible signal using the indication circuitry after outputting the data.

Regarding claim 40: Indicating presence of the at least one selected object using the indication circuitry of the remote communication device associated with the at least

one selected object; and outputting another wireless signal responsive to the receiving using the remote communication device associated with the at least one selected object.

Regarding claim 46: Emitting a human perceptible signal after the receiving using the indication circuitry of the at least one identified radio frequency identification device; and emitting another wireless signal using radio frequency identification device communication circuitry of the at least one identified radio frequency identification device, wherein the another wireless signal identifies the at least one identified radio frequency identification device.

Regarding claim 64: Extracting data from a received wireless signal and indicating presence responsive to the extracting.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
